FOREWORD

Data used to prepare this report are taken from birth, death, fetal (stillborn), marriage and divorce certificates of these events occurring in calendar year 1981 and filed in the Office of the West Virginia Registrar of Vital Statistics prior to April 1, 1982. Vital events occurring to West Virginia residents in other states, and recorded in the office of the registrar by April 1 are also included in totals by residence.

All statistics contain variations, which are the result of chance. This characteristic is of particular importance in classification with small numbers of events where small variations are proportionately large in relation to base figures. As an example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in these rates. For this reason, rates for counties with small populations or other small bases should be used cautiously.

Our efforts to make this report more useful in planning and evaluation have continued. Additional data tables displaying vital statistics by county have been included in this report to meet the increasing needs of our data users.

Suggestions and comments on alternate methods of data presentation are welcome. Forward any suggestions to the address below.

Health Statistics Center

METHODOLOGY

Place of Residence Vs. Place of Occurrence

Data on vital events can be reported in two ways, by county of residence or by county of occurrence. For example, Lincoln County, reported 82 deaths as occurring within the confines of the county. However, resident deaths for 1981 totaled 210. With the exception of Tables 16 and 27, the mortality data presented in this report is based on county of residence.

With the exception of Table 5, birth data is similarily reported by county of residence.

Geographic Classification

The county has been used as the basic unit of tabulation throughout this report. Data have also been supplied by health planning regions and, of course, for the total state. In some instances data have been supplied for individual cities.

Cause of Death Classification

The cause of death is coded from information contained in the medical certification section of the death certificate. This portion of the certificate is completed by the attending physician. In the case of an unattended death, the medical examiner is responsible for investigation and certification. As a general rule, data preceding 1949 cannot be accurately compared with that of later years due to the extensive revision of the coding rules made at that time. However, it was felt that large causal categories could be compared. See Appendix B Grouping of ICDA Codes for a listing of these selected causes.

International Classification of Diseases (ICDA)

The primary cause of death was coded in accordance with the Ninth Revision of the International Classification of Diseases Adapted for Use in the United States, 1975 (ICDA). The deaths with codes 000 through 799 were coded using the "nature of injury" while those with codes 800 through 999 were coded using the E or "external cause" of death. The E codes have been used to show a death was due to an external rather than an internal cause. Thus a death due to gun shot would be coded using an E code while a death due to cancer would not.

In several tables individual causes of death have been grouped into important selected causes of death. The ICDA codes for the different groupings can be found in Appendix B.

Population

Population figures for 1970 and 1980 used throughout this report are taken from the U. S. Department of Commerce, Bureau of the Census publications, "Current Population Reports", Series P-26, No. 77-48 and "West Virginia Final Population and Housing Unit Counts", PHC80-V-50, March, 1981.

Forms

The following is a list of the certificates and forms used in obtaining the data used in this publication. A sample copy of each can be found in Appendix A.

Certificate of Live Birth
Physician's Certificate of Death
Medical Examiner's Certificate of Death
Certificate of Fetal Death
Application for Marriage License
Monthly Report of Divorces and Annulments of Marriage Granted

Rates and Ratios

The impact of chance variation must be considered in evaluating categories with small frequencies. For example, a small change in the number of infant deaths in a county can disproportionately affect the infant mortality rate for the county. Thus, rates for cities and counties require special consideration. Regional and state rates, with larger frequencies, result in more realistic data.

Rates used in this report are calculated with 1980 Census population figures as provided by the Bureau of the Census. The following rates and ratios are used throughout this report.

Birth Rate (Crude)

$$= \frac{\text{Number of live births}}{\text{Population}} \quad \times \quad 1{,}000$$

Death Rate (Crude)

$$= \frac{\text{Number of deaths}}{\text{Population}} \quad \times \quad 1{,}000$$

Cause of Death Rate

$$= \frac{\text{Number of deaths from a stated cause}}{\text{Population}} \quad \times \quad 100{,}000$$

Infant Death Rate

$$= \frac{\text{Number of infant deaths}}{\text{Number of live births}} \quad \times \quad 1{,}000$$

Neonatal Death Rate

$$= \frac{\text{Number of neonatal deaths}}{\text{Number of live births}} \quad \times \quad 1{,}000$$

Fetal Death Ratio

$$= \frac{\text{Number of fetal deaths}}{\text{Number of live births}} \quad \times \quad 1{,}000$$

Maternal Death Rate

$$= \frac{\text{Number of maternal deaths}}{\text{Number of live births}} \quad \times \quad 100{,}000$$

DEFINITIONS

LIVE BIRTH - A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breaths or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

BIRTH WEIGHT - The weight of the fetus or infant at the time of delivery.

CAUSE OF DEATH - The underlying cause of death, or that condition giving rise to the chain of events leading to death.

FETAL DEATH (STILLBIRTH) - Death prior to the complete expulsion or extraction from its mother of a product of conception, having passed through at least the 20th week of gestation; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

INFANT DEATH - Death occurring to an individual of less than 1 year of age.

MATERNAL DEATH - Death attributable to delivery or a complication of pregnancy, childbirth, or the puerperium as defined by the International Classification of Diseases.

NEONATAL DEATH - The death of a liveborn infant which occurrs withing the first 27 days of life.

OCCURRENCE DATA - Vital statistics compiled on the basis of where the vital event actually occurred.

RESIDENCE DATA - Vital statistics compiled on the basis of the usual place of residence of the person(s) to whom the vital event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.
